ASPIRE POWERED PIVOT FRAMES UPDATE!

We've updated the design of the Aspire Powered (LSS390665) and Manual (LSS390670) Pivot Frames! Both designs have cleaner lines and increased patient clearance. Additionally, the powered frame now comes with a LINAK actuator powered directly from the lifter control box & battery. This means the carer can now control both the lifter and the pivot frame-with a single handset instead of having to use both the old thumb button on the pivot frame plus the lifter handset.

These changes will begin from Dec 2020 orders. Old stock of powered pivot frames has changed codes to LSS390665-O.

Note: To facilitate the new integrated power connection, lifters need to be amended by Service Teams to include an electric cable that runs through the lifter frame to the control box. All Service teams will be given instructions showing how to conduct this work in coming days.

IMPROVED FEATURES

- **Integrated electronics** – The powered pivot frame is now controlled by the Lifter control box and new LINAK handset;
- **Simplified electronics** - The old battery and thumb button have been removed giving the powered pivot frame a cleaner design with less obstructions; &
- **Cleaner design** – Both manual and powered pivot frames now have increased patient clearance height.
